

WHAT IS CLAIMED IS:

1. A golf club head comprising:

A body having a hollow interior, an opening formed in an upper surface of said body, a ferrule for
5 a golf club formed protruding upward in a rear side of said body, said opening having an annular combining surface:

An upper cap having a shape matching with that of said body, closed up on said opening of said body:
10 and,

Characterized by a support plate inserted internally in said opening, said support plate having two opposite ends formed respectively with a recessed surface, said two recessed surfaces respectively
15 fitting with an inner edge of said opening, one of said recessed surface located near a striking face of said body and propping up sidewise said striking face, said support plate having an intermediate curved portion as wide as that of said opening of said body; said two
20 recessed surfaces of said support plate adhered with a bottom surface of said annular connect surface with said intermediate curved portion located across said opening and flush with the top of said annular combining surface of said opening; said upper cap
25 closed on said body and adhered with said annular combining surface and said curved portion of said

support plate; thus the combined strength of said upper cap with said body reinforced, said golf club head prevented from disfiguring at the moment of striking a ball.

5 2. The golf club head as claimed in Claim 1, wherein said support plate is positioned in the center portion of said opening of said body and vertical to said striking face.

10 3. The golf club head as claimed in Claim 1, wherein said support plate is positioned at one side of said opening.
